WaCRM Production Hosting & Price Comparison

DOCUMENT ID: WACRM-HOST-2026
DATE: October 2026
TARGET: Production Deployment

Comprehensive technical evaluation, architecture feasibility, and Total Cost of Ownership (TCO) analysis for hosting the WaCRM stack (FastAPI Backend, React Vite Frontend, MySQL 8.0, WhatsApp Cloud API & Meta Lead Ads Webhooks).

1. System Architecture & Workload Requirements

Component	Technology	Production Hosting Requirement	Critical Constraints
Frontend	React.js (Vite Build)	Static Web Hosting / Nginx Reverse Proxy	Fast CDN delivery; client-side routing
Backend API	Python FastAPI + Uvicorn	24/7 Persistent Linux Process (systemd/PM2)	Zero sleep mode; webhook latency < 500ms
Database	MySQL 8.0 (InnoDB)	High IOPS persistent disk + Daily Automated Dumps	UTF8mb4 collation; relational integrity
Integrations	Meta Lead Ads & WhatsApp	Valid HTTPS Domain (Port 443, SSL/TLS)	Meta requires 200 OK within 5s on webhooks
Storage	Local /uploads directory	Persistent file volume (Quotations, Excel imports)	Cannot use ephemeral serverless disks

2. Hosting Platform Price & Technical Comparison

Evaluation of leading infrastructure platforms across monthly expenditure, India regional availability, webhook compatibility, and setup complexity:

Hosting Model	Target Providers	Specs Included	Monthly Cost (USD / INR)	Webhook Reliability	Overall Rating
Option 1: Cloud VPS [RECOMMENDED]	Hostinger KVM 2 / Hetzner / DigitalOcean	2 vCPU, 4GB RAM, 50GB NVMe, Nginx + MySQL + FastAPI on 1 box	**$5 – $8 / mo (■450 – ■699 / mo)**	**100% Reliable** Always-on daemon	**9.5 / 10 Lowest TCO, top speed**
Option 2: AWS Lightsail [ENTERPRISE VPS]	Amazon Web Services (Mumbai Region)	1–2 vCPU, 2GB–4GB RAM, 60GB SSD, AWS Global Backbone	**$10 – $20 / mo (■840 – ■1,680 / mo)**	**100% Reliable** AWS 99.99% SLA	**9.0 / 10 Brand trust & low ping**
Option 3: PaaS Cloud [DEVELOPER EASY]	Render.com / Railway.app + Vercel	FastAPI Web Service + Managed MySQL addon + Vercel edge	**$16 – $28 / mo (■1,350 – ■2,350 / mo)**	**Paid Plan Only** Free tier sleeps & drops leads	**7.5 / 10 Zero setup, higher cost**
Option 4: Enterprise AWS [HIGH SCALE]	AWS EC2 (t4g.small) + AWS RDS MySQL	Separated App instance + Multi-AZ managed database + S3	**$45 – $85 / mo (■3,800 – ■7,100 / mo)**	**100% Reliable** Enterprise tier	**6.5 / 10 Overkill for MVP CRM**

3. Annual Total Cost of Ownership (TCO) Projection (1 Year)

Cost Line Item	Option 1: Hostinger VPS	Option 2: AWS Lightsail	Option 3: Railway / Render	Option 4: AWS EC2 + RDS
Backend Compute (FastAPI)	Included in VPS	Included in Instance	■590 / mo ($7/mo)	■1,600 / mo ($19/mo)
Database (MySQL 8.0)	Included on localhost	Included on localhost	■670 / mo ($8/mo)	■2,350 / mo ($28/mo)
Frontend Hosting (React Vite)	Included (Nginx static)	Included (Nginx static)	■0 (Vercel Free Tier)	■350 / mo (S3 + CloudFront)
SSL / TLS Certificate	■0 (Let's Encrypt)	■0 (Let's Encrypt)	■0 (Included)	■0 (AWS ACM)
Storage & Uploads (50GB)	Included in disk	Included in disk	■350 / mo (Vol/S3)	■400 / mo (EBS & S3)
Total Monthly Cost	**■499 / mo (~$6)**	**■840 / mo (~$10)**	**■1,610 / mo (~$19)**	**■4,700 / mo (~$56)**
Annual Cost (1 Year)	**■5,988 / year**	**■10,080 / year**	**■19,320 / year**	**■56,400 / year**

4. Recommended Architecture: Single-Host Linux VPS

■ Why the Cloud VPS Architecture is the Optimal Choice for WaCRM:

- **Zero Cold Starts for Meta & WhatsApp Webhooks:** Meta Developer Platform mandates a 200 OK response within 5,000ms. Serverless sleeping containers fail this and lead to disabled webhooks. A persistent VPS processes requests in <30ms.
- **Co-located MySQL:** FastAPI connects to MySQL over Unix socket/localhost with 0.1ms query latency, drastically speeding up dashboard analytics and Excel bulk imports.
- **Persistent File Storage:** Uploaded Excel lead rosters and generated quotation PDFs stay on persistent NVMe/SSD storage without needing third-party S3 integration or extra billable services.
- **Data Sovereignty:** Choosing a Mumbai data center (AWS Lightsail or Hostinger India) guarantees strict compliance with Indian data regulations and ensures minimal round-trip latency.

5. Production Deployment Implementation Roadmap

Phase	Action Items	Tools / Commands
Step 1: Domain & DNS	Point an `A` record (e.g. `crm.yourcompany.com`) to the VPS Public IP Address.	Cloudflare / Namecheap / GoDaddy DNS
Step 2: Server Provisioning	Install Python 3.11+, MySQL Server 8.0, Nginx, and Git on Ubuntu 24.04 LTS.	`apt update && apt install nginx mysql-server python3-venv`
Step 3: Database & Backend	Create `wa_crm` database, set up Python virtual environment, configure `.env`, start via systemd service.	`systemctl enable --now wacrm-backend` (Uvicorn 4 workers)
Step 4: Frontend Build & Nginx	Build React frontend (`npm run build`), configure Nginx reverse proxy routing `/api` to FastAPI and `/` to HTML static files.	`npm run build` -> `/var/www/wacrm/frontend/dist`
Step 5: SSL & Webhooks	Issue free TLS 1.3 certificate. Verify Meta Webhook with verify token and start live lead ingestion.	`certbot --nginx -d crm.yourcompany.com`
